Genius Electronic Lock

The Genius multipoint lock features two strong pins for security and sealing, and a deadbolt protected with anti-saw pins. The lock is operated by a hand-held key-fob - one press of the button automatically retracts all locking points.

When the door is closed all locking points automatically re-engage. In case of emergency the system is provided with a manual override and can be "keyed" for multiple users for installation in warden controlled developments. Alternatively the Genius can be operated via external access control systems such as key pads, intercoms or proximity detectors.

- Electronic access systems for the elderly and the infirm
- Remote control access and automatic locking
- Fully compatible with external access control systems ie. key pads, intercoms
- System can be fully integrated with automatic door openers for easier access by wheelchair users
- Works in conjunction with a high security multipoint locking system
- Manual system override in case of emergency
- Can be used with standard Pz 92 door furniture
