Quick-Grip Bar Clamps

The quick-grip "one hander" is the fastest, easiest and most effective way of solving your clamping requirements.

Most clamping jobs require one hand to position the material and two hands to position the clamp. Not so with the quick grip "one hander". It is a bar clamp which is operated with the squeeze of the hand.

This enables the work to be held with one hand whilst tightening the quick-grip with the other hand.

Simple but ingenious in design, the clamp consists of an adjustable jaw, fixed jaw, bar, removable pads and also a pistol grip handle with an advancing release trigger.

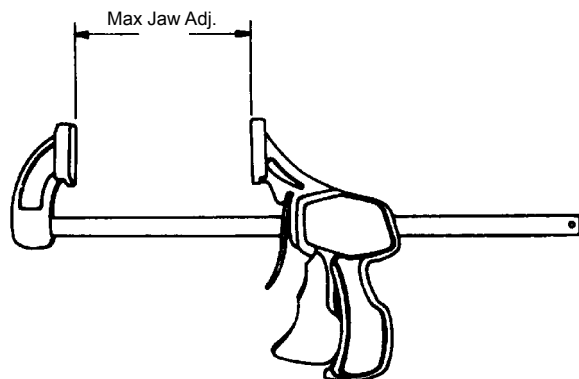

Part Numbers

Description	Max. Jaw Adj.	Part No.
Quick-Grip Bar Clamps	152mm	184170*
