The only BioCote protected window handle range in the UK
Effective against bacteria, mould & fungi. Hygiene from within.
In an industry exclusive, Mila has partnered with pioneer and global provider of antimicrobial solutions BioCote in this latest product innovation. The Grip™ CleanTouch espag handle has been developed by Mila’s in-house product design team and has a European patent. Grip™ is manufactured from a high-strength ABS material permeated with antimicrobial technology, rather than a lacquer, to provide continuous built-in protection for the lifetime of the product. This intelligent antimicrobial technology resists the growth and spread of microbes such as the H1N1 influenza virus.

Mila is the only hardware company to offer this BioCote technology.

**NEED TO KNOW**

- New ‘slide and clip’ screw cap covers the whole of the rose, is easy-to-fit and is design registered.
- Ergonomic button with options of locking, push-button and green-button for emergency exit.
- Available in 15mm, 20mm, 30mm and 40mm spindle lengths.
- Supplied complete with fixing screws as standard.
- Can be matched to any RAL colour.
- Also available in polished chrome effect or polished gold effect finishes.

**GUARANTEES**

- 10 year mechanical guarantee.
- 25 year surface finish guarantee.

**BioCote® Antimicrobial Technology** provides continuous built-in lifetime protection.

- **Industry Exclusive**
- **96% Reduction in the level of bacteria**
- **Permanent, Continuous Built-In Antimicrobial Protection**

- **60% Less Embodied Carbon** than a zinc window handle & certified by The Carbon Trust, fully recyclable & meets latest Building Regulation requirements

**HACCP Certified**

- BioCote is the only HACCP certified antimicrobial technology in the UK which means it is safe to be used in areas where food hygiene is paramount.
- *Food safety methodology Hazard Analysis Critical Control Point*

**Tested to Last a Lifetime**

- Independently tested to 50,000 cycles

**Warm-Touch Grip**

- using temperature resistant thermoplastic

**Never-Rust Material**

- 100% corrosion & chemical resistant, suitable for aggressive environments

**World Health Organisation**

The H1N1 influenza virus caused a 2009 pandemic. The world is now in the post-pandemic period. Based on knowledge about past pandemics, the H1N1 (2009) virus is expected to continue to circulate, causing variable levels of disease and outbreaks, for some years to come.

WHO advises that there is still public health value in using monovalent H1N1 vaccine to immunise persons at risk of severe disease from H1N1 influenza infection as well as other measures to combat the international spread of outbreaks.
