

ProLinea Wrap Around Window Locking System

High Security for Large Window Sashes

The ProLinea wrap around window locking system is perfect for large window sashes - such as top hung windows, conservatory windows and parallel opening windows - to effectively seal the window all the way around whilst also providing enhanced security.

Design

The intelligent design enables effective gasket compression from the sash into the frame to prevent draughts. A combination of wrap around corner shootbolts provide strong, anti-jemmy protection and additional locking points on the extensions offer extra security.

Flexibility

ProLinea wrap around enhanced security locking system is suitable for casement sashes from 500mm to 2100mm wide and from 300mm high.

Hardware

ProLinea shootbolt extensions: 8mm, 9mm and 13mm cam heights

ProLinea gearboxes: 20mm or 22mm backsets

NightSecure striker range

Extensions can be cropped to size to ensure locking points are located in the optimum position.

Total Control

Hardware can even be wrapped around the entire window from top to bottom, assuming friction hinges do not obstruct the Eurogroove, for any size window (profile specifications limiting) and operate the hardware from a single handle operation.

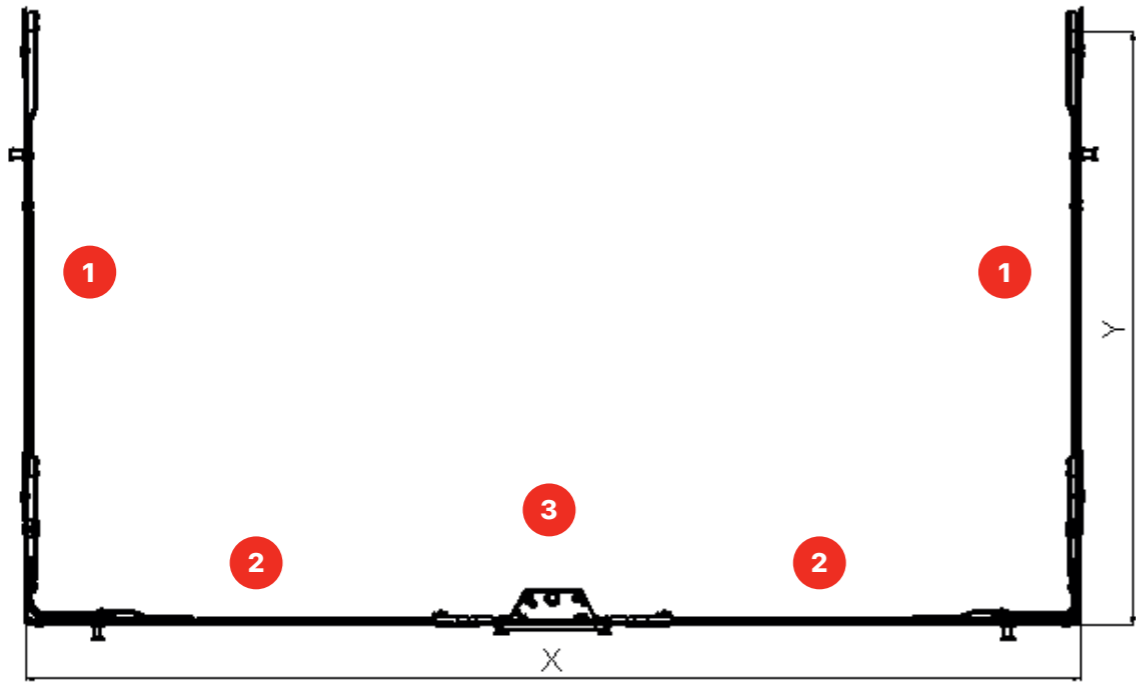

Testing

The ProLinea wrap around enhanced security locking system is tested to PAS24: 2016 and is a Police Preferred Specification product, Secured by Design approved.
